

Philmont Scout Ranch - Cimarron, New Mexico

Attached is the 2011 Philmont Health and Medical Record form requiring a doctor's evaluation and signature (dated after July 11, 2010). This form will be reviewed by the Expedition Leader and Adult Advisors prior to departing for Philmont, and again by the Philmont Medical Staff prior to starting the trek. Any errors or omissions could cause delays with the check-in process. No one (Scout or Adult) may start their trek until the Philmont Medical Staff has signed off that they are "trail-ready." Forms must be turned in to your Expedition Leader, not at the Council Service Center, as soon as ready, but no later than . (unless an extension is requested and granted).

A. Philmont Health and Medical Record (8 pages)

- 1. Please follow all instructions carefully; an incomplete or improper form can cause delay, significant problems or expense during check-in at Philmont.
- 2. Neatness counts. Illegible forms will delay the check-in process.
- 3. Each participant and parent must complete Parts A & B. Do not leave any sections blank. Do not leave immunization dates blank. Participant AND parent sign and date on Part B.
- 4. Top of Parts A, B, & C, fill in High-adventure base participants box as follows: "Expedition/crew No." is 629-D. Leave "or staff position" blank.
- 5. Top of Part A, fill in General Information as follows: "Council name/No." is Mecklenburg County/415.
- 6. A certified and licensed health-care provider must complete Part C, and must sign and date.
- 7. Part D is required to be reviewed by each participant and parent. Part D must be shared with the examining health-care provider before completing Part C.
- 8. This form must be signed by (1) the participant, (2) the parent (for youth participants), and (3) the physician. That's 3 signatures. Don't overlook any of them.
- 9. This original form must be used in lieu of any other BSA health form. (A copy of Parts A, B, & C may be used by Scouts & adults for other Troop and BSA activities.)
- 10. The medical evaluation (doctor's actual examination) must occur within a year of the end of the expedition. Make sure Part C is dated after July 11, 2010.
- 11. Be sure to attach a photocopy of both sides of your insurance ID.
- 12. Make a photocopy of Parts A, B, & C of this form to keep for your own records and backup. You may not get it back.
- 13. Please take care of this form and do not misplace it; we do not have any extra and it would be a hassle to get more.
- 14. Please follow all instructions carefully; an incomplete or improper form can cause delay, significant problems or expense during check-in at Philmont.

Completed forms are to be turned in to	your Expedition Leader, not at the Council Service Center, as soon as ready, but
no later than	, (unless an extension is requested and granted).

TO: Philmont Scout Ranch Contingent Leaders and Crew Advisors

FR: Mark S. Anderson, Director of Program

RE: Philmont 2011 Health and Medical Record Forms and First Aid Requirement Update

Enclosed are the 2011 Annual Health and Medical Record Forms for each member of your crew. All 2011 Philmont Participants will use this form. We have combined our information along with the other National High Adventure Bases to create one national health form. As a result the form is much different from previous years.

The form is divided into four parts.

- Each participant will need to complete **Part A and B**. This health history, parental/guardian informed consent and hold harmless/release agreement is to be completed by the participant and parents/guardians.
- Part C is the physical exam that is required for all participants. It is to be completed and signed by a certified and licensed health-care provider physician (MD or DO), nurse practitioner, or physician assistant.
- Part D is required to be reviewed by all participants at Philmont Scout Ranch. It must be <u>shared</u> with the examining health-care provider before completing Part C. Part D includes a description of the *Trek Experience*, the *Risk Advisory*, *Recommendations Regarding Chronic Illnesses* and definition of the *Weight Limits*.

The new national form, **Annual Health and Medical Record**, is available online at http://www.scouting.org/scoutsource/HealthandSafety. In order to insure that each member of your crew has the correct form, we are mailing a copy of the form for each participant. Please distribute these as soon as possible so that each participant can begin making plans to complete the process.

Preparing for the Philmont experience is an important task. All participants should be in the best physical condition possible. This includes a thorough medical exam by a licensed physician, an aggressive conditioning program, and careful attention to the participation requirements.

Your crew is encouraged to begin an aggressive conditioning program soon. Please don't wait until spring. Many participants have commented on evaluation forms that the one thing that they wish they would have done differently in preparing for the adventure is to be in better physical shape. This can occur with a routine that <u>starts now!</u> Some crews have stated that it helps if each crew member records their physical activity and periodically shares this information with the Advisor or the entire crew.

<u>Philmont is serious about the height and weight requirements for all participants.</u> Obesity is directly related to many health conditions that affect a Philmont participant including cardiovascular disease, hypertension, diabetes mellitus, asthma, musculoskeletal conditions and physical fitness. Each year a number of people are sent home who do not meet the requirements outlined on the chart! This is **very disappointing** to the participant and can cause hardship to the adventure for the rest of the participants in the crew.

In 2010, 14 participants were sent home who did not meet the height and weight requirements. Please don't let this happen to members of your crew! Insist that each participant locate their standing on the chart and for those who fall above the "Maximum Acceptable" weight for height, insist that they begin a program of exercise and diet that will help them reach their required range.

Please be aware that as the Advisor of the crew you must be able to certify that each participant fulfills the following requirements:

- ✓ Meets the height and weight requirements as outlined in **Part C** and **Part D** of the 2011 Annual Health and Medical Record. Please note that this year the participant is asked to sign at the bottom of **Part B** that they meet Philmont's Height and Weight requirements. (If a participant must be sent home, it will be your responsibility to inform them and to assist in making the necessary arrangements.)
- ✓ Each participant (youth and adult) must have a tetanus shot within the past 10 years. Be sure that the date is clearly written on the Health and Medical Record. If the shot is administered at Philmont a \$50.00 fee will be charged.
- ✓ Well controlled health conditions within the limits described in **Part D** of the 2011 Record.
- ✓ Copy of health insurance card (both sides). Please staple to the top of page one of the 2011 Health and Medical Record.

Enclosed is additional information to help your crew meet the 2011 First Aid and CPR requirements.

This can be found in the Philmont 2011 Council & Unit Planning Guide - Page 2

FIRST AID AND CPR CERTIFICATION REQUIRED

Philmont requires that at least <u>one person</u>, preferably two, (either an Advisor or a youth participant) <u>in each crew be currently certified in Wilderness First Aid or the equivalent* and CPR from the American Heart Association, the American Red Cross or the equivalent.</u> Wilderness First Aid is the assessment of and treatment given to an ill or injured person in a remote environment where definitive care of a physician and/or rapid transport is not readily available. Wilderness First Aid training is a sixteen hour course. Several hours may be required for Philmont staff to reach a remote backcountry location after a message is delivered to the nearest staffed camp. Wilderness First Aid and CPR training will result in proper and prompt attention being given to injuries and/or illnesses. You must present current certification cards upon check in to verify this requirement.

*Equivalent training can be obtained from the following nationally-recognized organizations:

American Red Cross - www.redcross.org

American Safety and Health Institute - www.ashinstitue.org

Emergency Care and Safety Institute - www.ESCInstitute.org

National Outdoor Leadership School (Wilderness Medicine Institute) - www.nols.edu/wmi/

National Safety Council - www.nsc.org

National Ski Patrol - Outdoor Emergency Care - www.nsp.org

Stonehealth Open Learning Opportunities (SOLO) - www.soloschools.com

The Mountaineers - www.mountaineers.org

Wilderness Medical Associates (WMA) - www.wildmed.com

Wilderness Medical Society (WMS) - www.wms.org

Wilderness Medicine Outfitters - www.wildernessmedicine.com

Wilderness Medicine Training Center www.wildmedcenter.com

Wilderness Safety Council www.wfa.net

Wilderness Safety & Emergency Response (W.I.S.E.R.) www.wiser-wfr.com

The Boy Scouts of America and the American Red Cross have a national agreement, the primary goal of which is to help councils (with their districts and units) become self sufficient teaching Red Cross courses, including First Aid. Wilderness First Aid is specified in the agreement. Through this agreement a local council can coordinate training of American Red Cross courses by providing BSA volunteers who are certified to instruct the course by the American Red Cross. The fees for the course taught by the BSA volunteers are dramatically reduced and include a \$5.00 administrative fee and the cost of materials. Visit with your council service center for more information about the American Red Cross National Agreement.

Philmont encourages each crew to have at least one person trained in Wilderness First Aid or the equivalent. However, Philmont will accept the following advance levels of training and a copy of the license or certification must be shared with Philmont during the registration process:

□ Wilderness First Responder	□ Registered Nurse
□ Outdoor Emergency Care	☐ Licensed Nurse Practitioner
□ EMT Basic, Intermediate, or Paramedic	☐ Licensed Physician's Assistant
□ Military Corpsman or Medic	☐ Licensed Physician, MD or DO

Annual Health and Medical Record

(Valid for 12 calendar months)

Policy on Use of the Annual Health and Medical Record

In order to provide better care for its members and to assist them in better understanding their own physical capabilities, the Boy Scouts of America recommends that everyone who participates in a Scouting event have an annual medical evaluation by a certified and licensed health-care provider—a physician (MD or DO), nurse practitioner, or physician assistant. Providing your medical information on this four-part form will help ensure you meet the minimum standards for participation in various activities. Note that unit leaders must always protect the privacy of unit participants by protecting their medical information.

Parts A and B are to be completed at least annually by participants in all Scouting events. This health history, parental/guardian informed consent and hold harmless/release agreement, and talent release statement is to be completed by the participant and parents/guardians.

Part C is the physical exam that is required for participants in any event that exceeds 72 consecutive hours, for all high-adventure base participants, or when the nature of the activity is strenuous and demanding. Service projects or work weekends may fit this description. Part C is to be completed and signed by a certified and licensed heath-care provider—physician (MD or DO), nurse practitioner, or physician assistant. It is important to note that the height/weight limits must be strictly adhered to when the event will take the unit more than 30 minutes away from an emergency vehicle–accessible roadway, or when the program requires it, such as backpacking trips, high-adventure activities, and conservation projects in remote areas.

Part D is required to be reviewed by all participants of a high-adventure program at one of the national high-adventure bases and shared with the examining health-care provider before completing Part C.

- Philmont Scout Ranch. Participants and guests for Philmont activities that are conducted with limited
 access to the backcountry, including most Philmont Training Center conferences and family programs,
 will not require completion of Part C. However, participants should review Part D to understand potential
 risks inherent at 6,700 feet in elevation in a dry Southwest environment. Please review specific registration
 information for the activity or event.
- Northern Tier National High Adventure Base.
- Florida National High Adventure Sea Base. The PADI medical form is also required if scuba diving at this base.

Risk Factors

Based on the vast experience of the medical community, the BSA has identified the following risk factors that may limit your participation in various outdoor adventures.

- · Excessive body weight
- · Heart disease
- Hypertension (high blood pressure)
- Diabetes

- Seizures
- Lack of appropriate immunizations
- Asthma
- Allergies/anaphylaxis
- Muscular/skeletal injuries
- Psychiatric/psychological and emotional difficulties

For more information on medical risk factors, visit Scouting Safely on www.scouting.org.

Prescriptions

The taking of prescription medication is the responsibility of the individual taking the medication and/or that individual's parent or guardian. A leader, after obtaining all the necessary information, can agree to accept the responsibility of making sure a youth takes the necessary medication at the appropriate time, but BSA does not mandate or necessarily encourage the leader to do so. Also, if state laws are more limiting, they must be followed.

INFORMED CONSENT AND HOLD HARMLESS/RELEASE AGREEMENT

High-adventure base participants:	
Expedition/crew No.:	

I understand that participation in Scouting activities involves a certain degree of risk and can be physically, mentally, and emotionally demanding. I also understand that participation in these activities is entirely voluntary and requires participants to abide by applicable rules and standards of conduct.

In case of an emergency involving me or my child, I understand that every effort will be made to contact the individual listed as the emergency contact person. In the event that this person cannot be reached, permission is hereby given to the medical provider selected by the adult leader in charge to secure proper treatment, including hospitalization, anesthesia, surgery, or injections of medication for me or my child. Medical providers are authorized to disclose protected health information to the adult in charge, camp medical staff, camp management, and/or any physician or health care provider involved in providing medical care to the participant. Protected Health Information/Confidential Health Information (PHI/CHI) under the Standards for Privacy of Individually Identifiable Health Information, 45 C.F.R. §§160.103, 164.501, etc. seq., as amended from time to time, includes examination findings, test results and treatment provided for purposes of medical evaluation of the participant, follow-up and communication with the participant's parents or guardian, and/or determination of the participant's ability to continue in the program activities.
I have carefully considered the risk involved and give consent for myself and/or my child to participate in these activities. I approve the sharing of the information on this form with BSA volunteers and professionals who need to know of medical situations that might require special consideration for the safe conducting of Scouting activities.
I release the Boy Scouts of America, the local council, the activity coordinators, and all employees, volunteers, related parties, or othe organizations associated with the activity from any and all claims or liability arising out of this participation.
☐ Without restrictions.
☐ With special considerations or restrictions (list)
TALENT RELEASE AGREEMENT
I hereby assign and grant to the local council and the Boy Scouts of America the right and permission to use and publish the photographs film/videotapes/electronic representations and/or sound recordings made of me or my child at all Scouting activities, and I hereby release the Boy Scouts of America, the local council, the activity coordinators, and all employees, volunteers, related parties, or other organizations associated with the activity from any and all liability from such use and publication.
I hereby authorize the reproduction, sale, copyright, exhibit, broadcast, electronic storage, and/or distribution of said photographs/film/videotapes/electronic representations and/or sound recordings without limitation at the discretion of the Boy Scouts of America, and I specifically waive any right to any compensation I may have for any of the foregoing. Part D

Participation at any of the BSA's high-adventure bases can be physically, mentally, and emotionally demanding. To be better prepared, each participant must complete the following before attending any high-adventure base:

- Fill in parts A and B of the Annual Health and Medical Record.
- Share Part D with the examining health-care provider.
- Have a physical exam by a certified and licensed health care provider/physician (MD, DO), nurse practitioner, or physician assistant, and have part C completed.
- · Read the following information, which focuses on specific risks at the high-adventure base you will be attending.

The Trek Experience. Each high-adventure base offers a unique experience that is not risk-free. Knowledgeable staff will instruct all participants in safety measures to be followed. Be prepared to listen to and carefully follow these safety measures and to accept responsibility for the health and safety of yourself and others.

Philmont. Each participant must be able to carry a 35- to 50-pound pack while hiking 5 to 12 miles per day in an isolated mountain wilderness ranging from 6,500 to 12,500 feet in elevation. Summer/autumn climatic conditions include temperatures from 30 to 90 degrees, low humidity (10 to 30 percent), and frequent, sometimes severe, afternoon thunderstorms. Activities include horseback riding, rock climbing and rappelling, challenge events, pole climbing, black powder shooting, 12-gauge trap shooting, .30-06 shooting, trail building, mountain biking, and other activities that have potential for injury.

Winter climatic conditions can range from -20 to 60 degrees. For the Kanik Experience, each person will walk, ski, or snowshoe along snow-covered trails pulling loaded toboggans or sleds for up to 3 miles, or more on a cross-country ski trek. Refer to the Philmont Scout Ranch website,

Northern Tier. Each person must be able to carry a 50- to 85-pound pack or cance from a quarter-mile to 2 miles several times a day on rough, swampy, and rocky portages and paddle 10 to 15 miles per day, often against a headwind. Climatic conditions can range from 30 to 100 degrees in summer/autumn and from -40 to 40 degrees in the winter. For the Okpik Experience, each person will walk, ski, or snowshoe along snow-covered trails or across frozen lakes, pulling loaded toboggans or sleds for up to 3 miles, or more if on a cross-country ski trek. Refer to the Northern Tier website for specific information.

Florida Sea Base. Climatic conditions at Florida Sea Base include temperatures ranging from 50 to 95 degrees, high humidity, heat index reaching to 110 degrees, and frequent, sometimes severe, afternoon thunderstorms. Activities include snorkeling, scuba diving, kayaking, canoeing, sailing, hiking, and other activities that have potential for injury. Refer to the Sea Base website for specific information.

Risk Advisory. All of the high-adventure bases have excellent health and safety records and strive to minimize risks to participants and advisors by emphasizing appropriate safety precautions. Because most participants are prepared, are conscious of risks, and take safety precautions, they do not experience injuries. If you decide to attend Philmont, Northern Tier, or Florida Sea Base, you should be physically fit, have proper clothing and equipment, and be willing to follow instructions, work as a team with your crew, and take responsibility for your own health and safety.

Parents, guardians, and participants in any high-adventure program are advised that journeying to and from these bases can involve exposure to accidents, illness, and/or injury.

High-adventure staff members have been trained in first aid, CPR, and accident prevention and are prepared to assist the adult advisor in recognizing, reacting to, and responding to accidents, injuries, and illnesses as needed. Each crew is required to have at least one member trained in wilderness first aid and CPR. Medical and search-and-rescue services are provided in response to an accident or emergency. However, response times can be affected by location, terrain, weather, or other emergencies and could be delayed for hours or even days in a wilderness setting.

Philmont. Participants and guests for Philmont activities that are conducted with limited access to the backcountry, including most Philmont Training Center conferences and family programs, should review Part D to understand potential health concerns risks inherent at 6,700 feet in elevation in a dry Southwest environment.

High elevation; physically demanding high-adventure program in remote mountainous areas; camping while being exposed to occasional severe weather conditions such as lightning, hail, flash floods, and heat; and other potential problems, including injuries from tripping and falling, falls from horses, heat exhaustion, and motor vehicle accidents, can worsen underlying medical conditions. Philmont's trails are steep and rocky. Wild animals such as bears, rattlesnakes, and mountain lions are native and usually present little danger if proper precautions are taken. Please call Philmont (575-376-2281) if you have any questions.

Northern Tier. While participating in Northern Tier's canoeing and camping wilderness areas, life jackets must be worn at all times when on the water. Crew members travel together at all times. Emergency communications via radio, and in more remote locations by satellite phone, are provided by Northern Tier. Radio communication and/ or emergency evacuation can be hampered by weather, terrain, distance, equipment malfunction, and other factors, and are not a substitute for taking appropriate precautions and having adequate first-aid knowledge and equipment. Please call Northern Tier (218-365-4811) if you have any questions.

Florida Sea Base. Several activities are offered, including snorkeling, sailing, camping, kayaking, canoeing, swimming, fishing, and scuba diving. Diving is an exciting and demanding activity. When performed correctly, it is very safe. When established safety procedures are not followed, however, there are extreme dangers. All participants will need to learn from the instructor the important safety rules regarding breathing and equalization while scuba diving. Improper use of scuba equipment can result in serious injury, so participants must be instructed to use the equipment safely under direct supervision of a qualified instructor.

To scuba dive safely, participants must not be extremely overweight or in poor physical condition. Diving can be strenuous under certain conditions. Participants' respiratory and circulatory systems must be in good health. All body air spaces must be normal and healthy. A person with heart trouble, a current cold or congestion, epilepsy, asthma, or a severe medical problem, or who is under the influence of alcohol or drugs, should not dive. If taking medication, participants should consult a doctor and the instructor before participation in this program. If there is a question about the advisability of participation, contact the family physician first, then call the Sea Base at 305-664-4173. The Sea Base health supervisor reserves the right to make medical decisions regarding the participation of individual at Sea Base.

Food. Each base offers food appropriate for the experience. If a participant has a problem with the diet described in the participant guide, please contact the high-adventure base you are considering attending.

Medications. Each participant who has a condition requiring medication should bring an appropriate supply for the duration of the trip. Consider bringing duplicate or even triplicate supplies of vital medications. People with allergies that have resulted in severe reactions or anaphylaxis must bring with them an EpiPen that has not expired.

Immunizations. Each participant must have received a tetanus immunization within the last 10 years. Recognition will be given to the rights of those Scouts and Scouters who do not have immunizations because of philosophical, political, or religious beliefs. In such a situation, the *Immunization Exemption Request* form is required.

Recommendations Regarding Chronic Illnesses. Each base requires that this information be shared with the parents or guardians and examining physician of every participant. There are no facilities for extended care or treatment; therefore participants who cannot meet these requirements will be sent home at their expense.

Staff and/or staff physicians reserve the right to deny the participation of any individual on the basis of a physical examination and/or medical history.

Adults or youth who have had any of the following conditions should undergo a thorough evaluation by a physician before considering participation at a BSA high-adventure base.

Cardiac or Cardiovascular Disease, including: ••

- 1. Angina (chest pain caused by blocked blood vessels or coming from the heart)
- 2. Myocardial infarction (heart attack)
- 3. Heart surgery or heart catheterization (including angioplasty to treat blocked blood vessels, balloon dilation, or stents)
- 4. Stroke or transient ischemic attacks (TIAs)
- 5. Claudication (leg pain with exercise, caused by hardening of the arteries)
- 6. Family history of heart disease or a family member who died unexpectedly before age 50
- 7. Diabetes
- 8. Smoking
- 9. Excessive weight

Youth who have a congenital heart disease or an acquired heart disease such as rheumatic fever, Kawasaki's disease, or mitral valve prolapse should undergo thorough evaluation by a physician before considering participating at a high-adenture base. The physical exertion at any of the high-adventure bases may precipitate either a heart attack or stroke in susceptible persons. Participants with a history of any of the first seven conditions listed above should have a physician-supervised stress test. More extensive testing (e.g., nuclear stress test) is recommended for participants who have coronary heart disease. Even if the stress test results are normal, the results of testing done at lower elevations, without backpacks, do not guarantee safety. If the test results are abnormal, the individual is advised not to participate.

Hypertension (High Blood Pressure). The combination of physical, mental, and emotional stress, increased exertion and/or heat, and altitude appears to cause a significant increase in blood pressure in some individuals. Occasionally, hypertension reaches such a level that it is no longer safe to engage in strenuous activity. Hypertension can increase the risk of having a stroke, heart attack, or angina. Participants should have a normal blood pressure (less than 140/90). Persons with significant hypertension (greater than 140/90) should be treated and controlled before attending any high-adventure base, and should continue on medications while participating. The goal of treatment should be to lower the blood pressure to normal. Participants already on antihypertensive therapy with normal blood pressure should continue on medications. Individuals taking diuretics to treat hypertension are at increased risk for dehydration related to strenuous physical activity and should be careful to maintain good hydration during the trek.

Philmont. Each participant who is 18 years of age or older will have his or her blood pressure checked at Philmont. Those individuals with a blood pressure consistently greater than 160/100 at Philmont may be kept off the trail until their blood pressure decreases.

Florida Sea Base. Those taking beta-blocker medication should consider a change of medication before participating in any scuba program.

Insulin-Dependent Diabetes Mellitus. Exercise and the type of food eaten affect insulin requirements. Any individual with insulin-dependent diabetes mellitus should be able to monitor personal blood glucose and to know how to adjust insulin doses based on these factors. The person with diabetes also should know how to give a self-injection. Both the person with diabetes and one other person in the group should be able to recognize indications of excessively high blood sugar (hyperglycemia or diabetic ketoacidosis) and excessively low blood sugar (hypoglycemia). The person with diabetes and one other individual should know the appropriate initial responses for these conditions. An insulin-dependent

person who has been newly diagnosed (within the last six months) or who has undergone a change in delivery system (e.g., insulin pump) in the last six months should not attempt to participate. A person with diabetes who has had frequent hospitalizations for diabetic ketoacidosis or who has had frequent problems with hypoglycemia should not participate until better control of the diabetes has been achieved.

Philmont. It is recommended that the person with diabetes and one other individual carry insulin on the trek (in case of accident) and that a third vial be kept at the Health Lodge for backup. Bring insulin in a small insulated container. Bring enough testing equipment and supplies for the entire trip and trek. Extras are usually needed. If an individual has been hospitalized for diabetes-related illnesses within the past year, the individual must obtain permission to participate by contacting the Philmont Health Lodge at 575-376-2281.

Florida Sea Base. Persons with diabetes who are 18 years of age or older who wish to scuba dive should be assessed by a physician familiar with both hyperbaric issues related to diabetes and medications used for the control and treatment of diabetes. Persons 18 years old or older who are determined to be candidates for scuba diving must submit four hemoglobin A1c (HbA1c) tests, each with HbA1c values less than 7, taken within the previous 12 months. Any test within the past 12 months with an HbA1c value greater than 7 disqualifies a person from scuba diving as part of a BSA activity.

Persons less than 18 years of age with Type 1 diabetes will not be allowed to scuba dive. Persons under the age of 18 who control their diabetes with exercise and diet (no medications) and can provide three sequential hemoglobin tests with HbA1c values less than 6 may be approved to scuba dive.

<u>Seizures (Epilepsy)</u>. A seizure disorder or epilepsy does not exclude an individual from participating at a high-adventure base. However, the seizure disorder should be well-controlled by medications. A minimum one year seizure-free period is considered to be adequate control. Exceptions to this guideline may be considered on an individual basis, and will be based on the specific type of seizure and the likely risks to the individual and to other members of the crew.

Florida Sea Base. Any seizure activity within the past five years, regardless of control and/or medication, disqualifies an individual from participation in any scuba program. A person with a history of seizure activity who has been asymptomatic AND medication-free for five years, as evidenced by a physician, will be allowed to dive.

Asthma. Asthma should be well-controlled before participating at any high-adventure base. Well-controlled asthma means: 1) the use of a rescue inhaler (e.g., albuterol) less than once daily; 2) no need for nighttime treatment with a rescue inhaler (e.g., albuterol). Well-controlled asthma may include the use of long-acting bronchodilators, inhaled steroids, or oral medications such as Singulair. You must meet these guidelines in order to participate. You will not be allowed to participate if: 1) you have exercise asthma not prevented by medications; or 2) you have been hospitalized or have gone to the emergency room to treat asthma in the past six months; or 3) you have needed treatment with intravenous, intramuscular, or oral steroids (prednisone) in the past six months. You must bring an ample supply of your medications and a spare rescue inhaler that are not expired. At least one other member of the crew should know how to recognize signs of worsening asthma or an asthma attack, and should know how to use the rescue inhaler. Any person who has needed treatment for asthma in the past three years must carry a rescue inhaler on the trek. If you do not bring a rescue inhaler, you must buy one before you will be allowed to participate.

Florida Sea Base. Persons being treated for asthma (including reactive airway disease) are disqualified from BSA scuba programs. Persons with a history of asthma who have been asymptomatic and have not used medications to control asthma for five years or more may be allowed to scuba dive as part of a BSA activity upon submission of evidence from their treating physician. Persons with a history of asthma who have been asymptomatic and have not used medication to control asthma for less than five years may be allowed to scuba dive as part of a BSA activity upon submission of a methacholine challenge test showing the asthma to be resolved.

<u>Allergy or Anaphylaxis.</u> Persons who have had an **anaphylactic reaction** from any cause must contact the high-adventure base before arrival. If you are allowed to participate, you will be required to have appropriate treatment with you. You and at least one other member of your crew must know how to give the treatment. If you do not bring appropriate treatment with you, you will be required to buy it before you will be allowed to participate.

Recent Musculoskeletal Injuries and Orthopedic Surgery. Every participant will put a great deal of strain on feet, ankles, and knees due to negotiating steep, rocky trails with a backpack; paddling and portaging heavy gear over irregular terrain; or climbing into and out of a boat. Therefore, individuals with significant musculoskeletal problems (including back problems) or orthopedic surgery/injuries within the last 6 months must have a letter of clearance from their orthopedic surgeon or treating physician to be considered for approval to participate. Permission is not guaranteed. A person with a cast on any extremity may participate only if approved by the high-adventure base. Ingrown toenails are a common problem and must be treated 30 days prior to arrival.

<u>Psychological and Emotional Difficulties.</u> A psychological disorder does not necessarily exclude an individual from participation. Parents and advisers should be aware that no high-adventure experience is designed to assist participants in overcoming psychological or emotional problems. Experience demonstrates that these problems frequently become magnified, not lessened, when a participant is subjected to the physical and mental challenges of a remote wilderness setting. Any condition should be well-controlled without the services of a mental health practitioner. **Under no circumstance should medication be stopped immediately prior to participation, and medication should be continued throughout the entire high-adventure experience.** Participants requiring medication must bring an appropriate supply for the duration of the trip.

Weight Limits. Weight limit guidelines are used because overweight individuals are at a greater risk for heart disease, high blood pressure, stroke, altitude illness, sleep problems, and injury. Those who fall within the limits are more likely to have an enjoyable trek and avoid incurring health risks.

Philmont. Each participant in a Philmont trek must not exceed the maximum acceptable limit in the weight chart shown on the Annual Health and Medical Record form. The right-hand column shows the maximum acceptable weight for a person's height in order to participate in a Philmont trek.

Participants 21 years and older who exceed the maximum acceptable weight limit for their height at the Philmont medical recheck WILL NOT be permitted to backpack or hike at Philmont. They will be sent home. For example, a person 70 inches tall cannot weigh more than 226 pounds. All heights and weights will be measured in stocking feet.

For participants under 21 years of age who exceed the maximum acceptable weight for height, the Philmont physicians will use their best professional judgment in determining participation in a Philmont trek. Philmont will consider up to 20 pounds over the maximum acceptable as stated on the chart; however exceptions are not made automatically, and discussion in advance with Philmont is required regarding any exception to the weight limit for persons under 21 years of age. Philmont's telephone number is 575-376-2281.

Under no circumstances will any individual weighing more than 295 pounds be permitted to participate in backcountry programs. This requirement is necessary due to rescue equipment restrictions and for the safety of search-and-rescue personnel.

The maximum weight for any participant in a Cavalcade Trek and for horse rides is 200 pounds.

Participants and guests in Philmont activities, including most Philmont Training Center conference and family programs, who will participate in limited backcountry access during their visit must not exceed the maximum acceptable limit in the weight chart.

Northern Tier. Each participant in a Northern Tier expedition should not exceed the maximum acceptable weight for height in the table shown on the Annual Health and Medical Record form. Those who fall within the recommended weight limits are much more likely to have an enjoyable trek and avoid incurring injuries and health risks. Extra weight puts strain on the back, joints, and feet. The portage trails can be very muddy, slippery, and rocky, and present a potential for tripping and falling. We also strongly recommend that no participant be less than 100 pounds in weight. Extremely small participants will have a very difficult time carrying canoes and heavy packs.

Canoes' loads are another important reason to limit participant weight. Northern Tier assigns three people to a canoe. The total participant load per canoe must not exceed 600 pounds, or an average of 200 pounds per participant. Northern Tier does not permit individuals exceeding 295 pounds to participate in high-adventure programs.

Florida Sea Base. Any participant or advisor who exceeds the maximum weight limits on the weight chart may want to reconsider participation in a Sea Base high-adventure program. Anyone who exceeds these limits is at extreme risk for health problems. Participants who fall within the guidelines are more likely to have an enjoyable program and avoid incurring health risks. The absolute weight limit for our programs is 295 pounds.

Height (inches)	Recommended Weight (lbs)	Allowable Exception	Maximum Acceptance
60	97-138	139-166	166
61	101-143	144-172	172
62	104-148	149-178	178
63	107-152	153-183	183
64	111-157	158-189	189
